Notes:

1. The reference to the state of the software object should we think be clear from the disclosure as a whole. The claims refer to the state of the object as it is being run. Perhaps we could amend if necessary to refer to the "dynamic state" of the software?
2. We don't consider "predetermined input" to be at all unclear. The value of the key must be selected before the watermark is embedded. Is it possible under US practice to substitute another word for "predetermined", or to delete "predetermined" (which would broaden the claim)?
3. Is it reasonable to amend to ".each member of the class of graphs having a property capable of being tested by integrity-testing software."?
4. Perhaps the words "in a dynamically determined fashion" can be deleted.
In this way the claim simply defines the way in which the state variables are updated by result.
5. Is it reasonable to replace "special" with a more descriptive expression such as "extraction facilitating" for example?
